Sumisho Aero-Systems Corporation

MOU with Anduril Industries, Inc. for collaboration in Japan

Sumisho Aero-Systems Corporation (hereinafter, SAS) and a defense technology company Anduril Industries, Inc. (hereinafter, Anduril) have signed Memorandum of Understanding (MOU) to collaborate in the field of Japanese national security.

Anduril has a strong reputation developing defense solutions across all domains: land, air, sea, space and cyber. Anduril brings a "software first" approach to defense technology with all systems leveraging Lattice, an open-architecture operating system that enables collaborative teaming of unmanned assets to accomplish mission objectives.

For more than 40 years, SAS has been proposing domestic and international defense equipment to the Japan Ministry of Defense to support Japanese national security. In the most severe and complex security environment, we aim to provide cutting edge domestic and international technologies and services for cross domain operational capabilities, sustainability, and resilience to contribute to the fundamental enhancement of defense capabilities.

With the conclusion of this MOU, SAS and Anduril will use Anduril's core capabilities, JADC2, to contribute to the increasingly intense security environment surrounding Japan.
